

Public Salary Databases

Learn what online tools to use for your salary research when negotiating your compensation.

How to use this resource

Hello,

My name is Alex Immel, Founder & CEO of [Next Level Negotiation](#). I created this resource for you because according to a [Fidelity study](#), **only 42% of job seekers negotiate their salary** yet nearly 9/10 are successful when they do.

Salary negotiation is daunting and can be scary. However, the more prepared you are, the less scary it becomes and the more confident you can be on the phone — a key to success for any conversation as important as your salary negotiation.

Part of being prepared means being ready to reference market research you've conducted for the role. This will be incredibly important in your negotiation, so, use this resource to find the right source(s) and anchor point for your conversation.

Good luck! You got this.

Alex Immel
Founder & CEO

P.S. If you want more in-depth personalized support with your salary negotiation, Next Level Negotiation has you covered. We have 10+ years of experience helping people negotiate \$26k average salary increases. Our model is 100% performance based, meaning you owe \$0 upfront and only pay if we successfully help you increase your salary.

Public Salary Databases

Name	Who it's for	Why I like it
<u>Salary.com</u>	Any role or industry.	Provides salary data, a personal salary report, and has a cost of living calculator.
<u>Glassdoor.com</u>	Any role or industry.	While I question the quality of their written reviews, I've always found their salary information and salary estimator tool helpful. It's especially useful for large corporations with a lot of self-reported salary data to reference.
<u>Payscale.com</u>	Any role or industry.	Mostly for organizations but has helpful data for individuals as well. Plus, there are a few tools to help you calculate cost of living or what you should be earning for your job.
<u>Levels.fyi</u>	Mostly tech, especially software engineers and those interviewing at top tech companies.	Detailed compensation data for different job levels, locations, and companies. They also highlight unique benefits a company has and assign a \$ value to them.
<u>Betts Recruiting</u>	Revenue-related roles mostly in tech (sales, customer success, sales ops, etc.)	Every year they provide a free compensation report broken down by region with reliable data for revenue related jobs.
<u>Blind</u>	Tech professionals, but also expanding into other industries.	A community discussion platform where people freely share their comp, they also have total compensation data aggregated from thousands of their users.
<u>Built in</u>	Tech	Great platform to get a holistic view of a company and its tech story before applying. Plus, very simple easy to read data for each role.
<u>Reprvue</u>	Experienced sales reps & newbies looking for tech sales jobs	Each company gets scored based on peer feedback, find out how much reps are making from \$60K/yr to top earners fetching \$1M+/yr.

Public Salary Databases

Name	Who it's for	Why I like it
<u>Robert Half</u>	Any role or industry.	Broken down by industry with reliable data.
<u>H1B Salaries</u>	International professionals looking for work visa sponsorship.	Access millions of H1B salaries from official data disclosed by the US Dept of Labor by company, job title, and location.
<u>Hired</u>	Tech	Interesting salary calculator based on real (not self-reported) data from Hired clients.
<u>Comparably</u>	Originally popular with people in tech, now expanded to all industries.	You can compare salaries and benefits with others in your industry, and as a bonus, they do "Best Company For..." awards for categories like Diversity, Leadership, Women, and more.
<u>Elpha</u>	Women in tech and startups.	Over 8,500 reported salaries you can access. It's also a community of women supporting each other in their careers, with discussions on salary, career advice, and more.
<u>Fishbowl</u>	Professionals interested in large employers like Google, Deloitte, and Accenture.	They have several salary 'bowls' you can access for discussions on compensation, negotiations, and raises for your role/industry.
<u>Big4Transparency</u>	Accountants and Consultants	Total transparency and 9,200+ responses on salary.
<u>US Bureau of Labor Statistics</u>	Most roles or industries.	A government website that is 100% accurate because it is a .gov source. It's difficult to navigate but if you can find your role and industry, it's very hard to dispute.
